

Yunfei Yu

MSc Integrated Product Design (KTH) · Engineering background · AI prototyping · Stockholm

phineasyu0812@gmail.com · +46 72 773 15 44 · linkedin.com/in/yunfeiyu · github.com/PhineasYu

PROFILE

Engineer turned product designer building AI prototypes end to end: agents, structured generation, answers that cite their source. I write the spec, direct AI coding agents, and do the testing and acceptance myself.

EXPERIENCE

UX/UI Design Intern — Revive Retail

May – Aug 2026

Pre-seed B2B SaaS for circular retail, Stockholm

- Replaced a manual monthly commission settlement with an automated reconciliation: I defined the rules, directed Claude Code to build it, and tested and accepted it.
- Checks every result against two independent sources and flags each row; the April run matched the ledger for four of five retailers, and I traced the fifth to a manual ledger adjustment.

UX/UI Design Intern — Kodiak Hub

Jun – Sep 2025

B2B SaaS for supplier relationship management, Stockholm

- Designed a prompt workflow for AI prototyping inside a design system, compared Figma Make, Uizard and Lovable, and shared a prompting guide with the team.
- Set up the company's first structured design-testing process, now a standing Jira step.

Packaging Laboratory Assistant — Unilever R&D Center

Jun 2022 – May 2024

Shanghai (via Adecco) · Transport testing, then a Dove hair-care pack launched in China, April 2024

PROJECTS & COMPETITIONS

Teamdex — 1st place, Uniplay Hackathon

Sep 2026

Onboarding game where newcomers collect colleagues; I wrote the spec and did acceptance; built with Claude Code

Full Context Canvas

Sep 2026

Chrome extension: Claude groups chats and saves, shows reason and confidence, queues doubtful items

LegacyChain

Sep 2026

Family archive where AI readings stay pending until a person accepts them; SHA-256 fingerprints, Next.js

Dossier — Top 8, Accel AI Innovate

Sep 2026

Spoken notes split by AI into memories and profile facts as structured JSON; ElevenLabs; built in a day

MicroHack — Microsoft Foundry and Fabric

Sep 2026

Three agents on one data agent in a workflow; human approval before any order; five-question evaluation

SAP Career Ignite — 1st place, team case

Apr 2026

Built a live AI control-tower dashboard in two hours and presented it instead of slides

Sushi Jerash — live ordering site, Jordan

May 2026

Spec and AI-directed build in two days: Next.js, Supabase, Telegram bot; run with a real customer

Also: 3rd, Deloitte Spark · 1st, Stone Leap Build-a-Game · 2nd, BitMagic game hackathon (all 2026)

EDUCATION

MSc Integrated Product Design — KTH Royal Institute of Technology

2024 – 2026

Innovation Management and Product Development · Thesis (co-authored): university-industry collaboration

BEng Packaging Engineering — Zhengzhou University

2017 – 2021

SKILLS & LANGUAGES

AI and build: Claude Code, Claude API, Lovable, Figma Make, ElevenLabs, Microsoft Foundry, prompt design

Code and tools: TypeScript, React, Next.js, Python, Supabase, Git (I review and test AI-written code), Figma

Languages: Chinese (native), English (professional working proficiency), Swedish (currently studying, SFI)
